

SIVILARI ÖLÇME

- ★ Su, süt, limonata, ayran, zeytinyağı gibi maddelere **sıvı maddeler** denir.
- ★ Sıvı maddeleri ölçmek için fincan, çay bardağı, su bardağı, sürahi, kova ve kepçe gibi araçlar kullanabiliriz.
- ★ Bunların hepsi farklı miktarda sıvı aldıkları için ölçüleri aynı değildir.

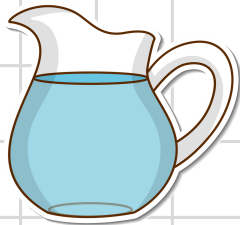

→ Bir **kepçe** çorba

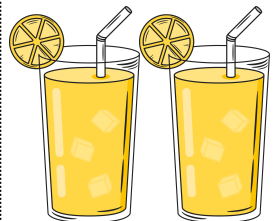

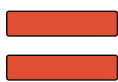

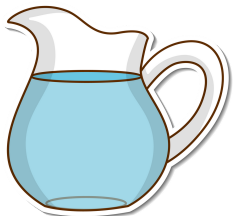

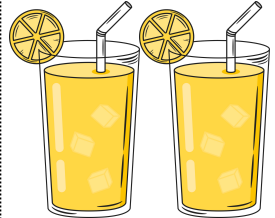

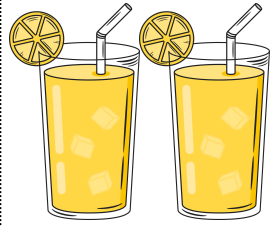

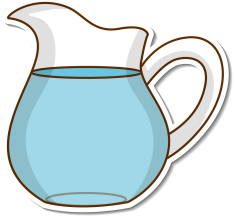

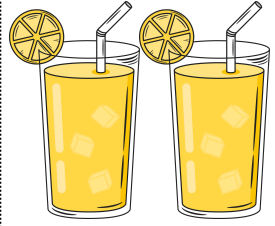

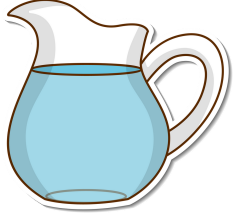

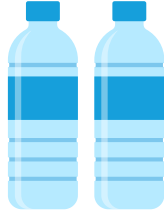

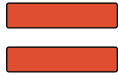

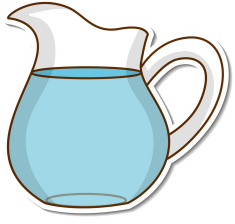

→ İki **bardak** limonata

DİKKAT!!

Sürahideki su miktarını birden fazla ölçme kullanarak ölçebiliriz. Ölçme araçlarımız değişse de sürahideki su miktarı değişmez. Yani bir sürahi suyu iki şişe ya da dört su bardağı olarak ölçebiliriz.

DEFTER GÖRSELLERİ

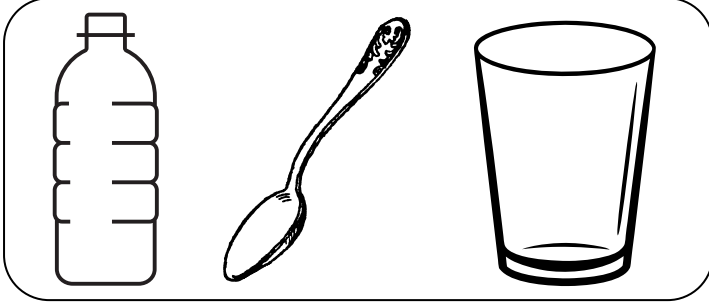

- Aşağıda verilen görsellerden sıvı ölçebileceklerimizi boyayalım.

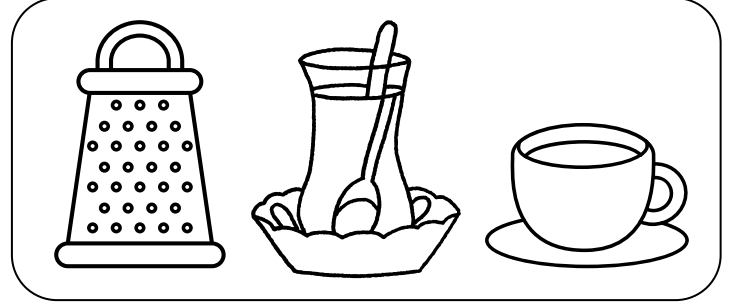

Aşağıda soruların cevaplarını boyayalım.

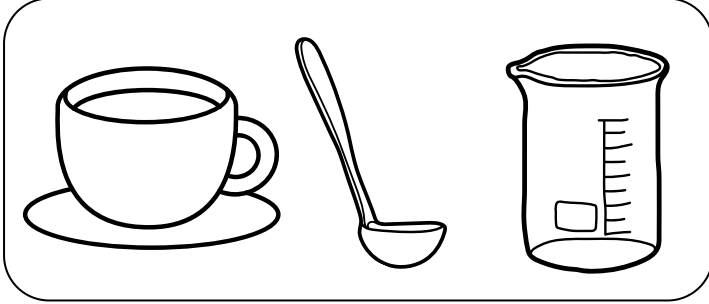

- Hangisi daha fazla sıvı alır?

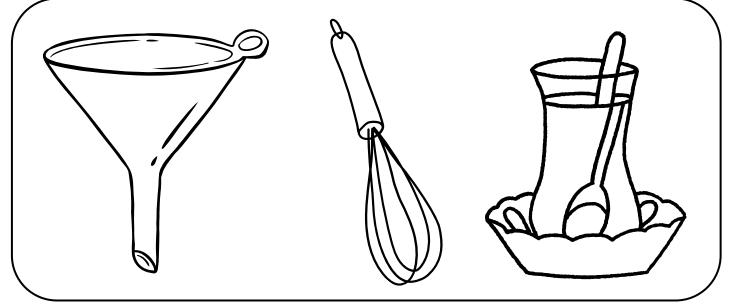

- Hangisiyle sıvı ölçemeyiz?

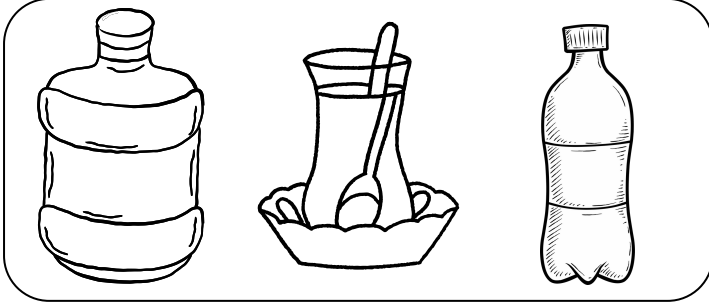

- Hangisi daha az sıvı alır?

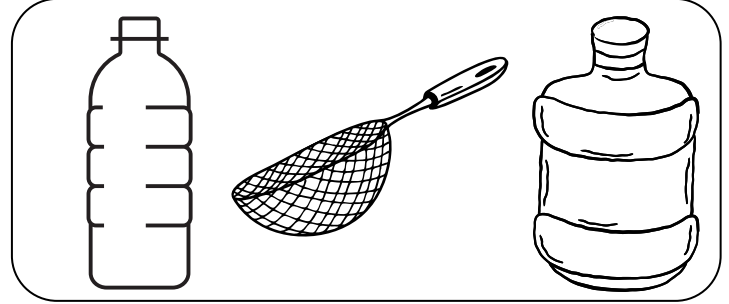

- Hangisiyle sıvı ölçebiliriz?

- Hangisi daha fazla sıvı alır?

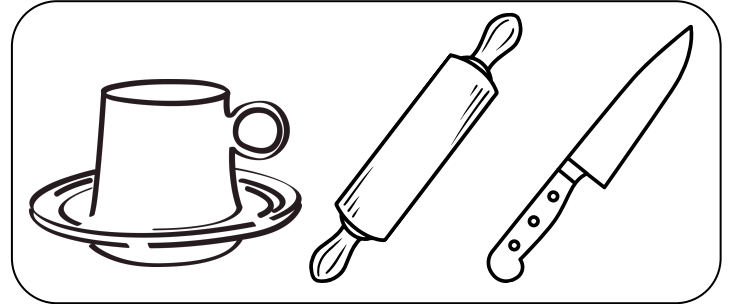

- Hangisiyle sıvı ölçemeyiz?

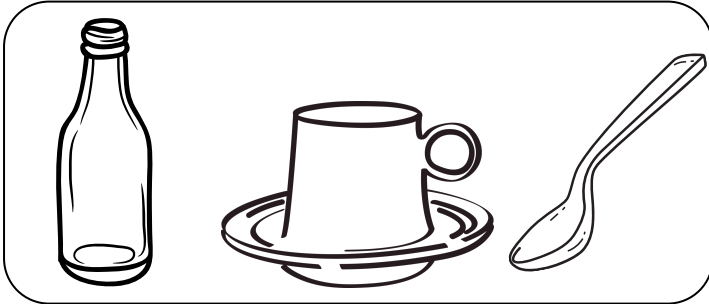

- Hangisi daha az sıvı alır?

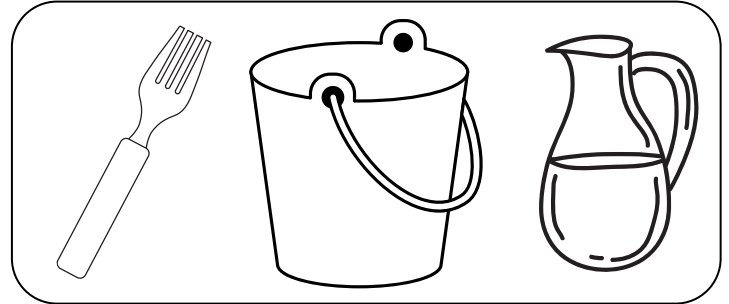

- Hangisiyle sıvı ölçebiliriz?

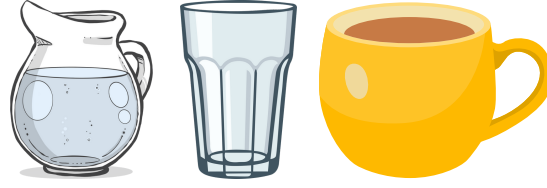

- Hangisi daha fazla sıvı alır?

- Hangisiyle sıvı ölçemeyiz?

Baştaki kabı hangi ölçme aracıyla daha hızlı dolduracağımızı tahmin edelim.
İşaretleyip şifreyi bulalım.
